Lab 1: Convolutional Neural Network

Lab Objective:

In this lab, you will be asked to build the state-of-the-art convolutional neural network architecture: *Residual Network (ResNet)* [1] and train it on the Cifar-10 dataset. Moreover, you need to use data augmentation during training.

Important Date:

1. Submit Experiment Report Deadline: 11/7 (Tue) 12:00

2. Demo date: 11/8 (Wed) after Lab

Requirements:

• Implement ResNet-20/56/110 [1]

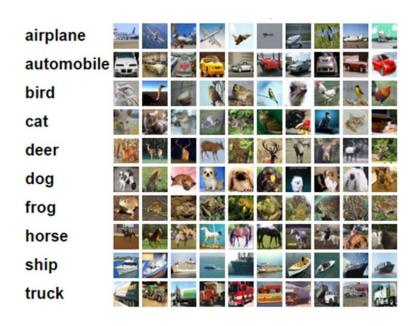

Train ResNet with data augmentation

• Compare to vanilla CNNs with same depth 20/56/110

Environment:

Cifar-10 dataset

The CIFAR-10 dataset consists of $60000~32 \times 32$ color images (RGB) in 10 classes, with 6000 images per class. There are 50000 training images and 10000 test images.

Sample Code:

There are many cifar-10 sample codes for pytorch:

https://github.com/kuangliu/pytorch-cifar

Lab Description:

Deep residual learning

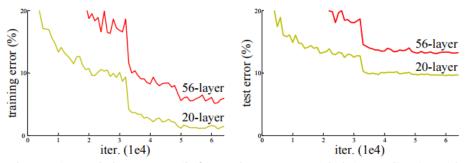

Figure 1. Training error (left) and test error (right) on CIFAR-10 with 20-layer and 56-layer "plain" networks. The deeper network has higher training error, and thus test error. Similar phenomena on ImageNet is presented in Fig. 4.

- Degradation problem: the network depth increasing, accuracy gets saturated (which might be unsurprising) and then degrades rapidly
- Not overfitting, it's the vanishing gradient problem
- Add shortcut connection! F(x) now is fitting residuals!

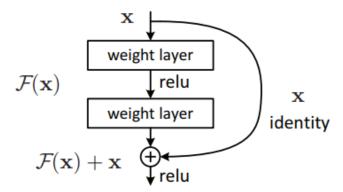

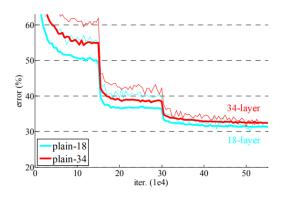

Figure 2. Residual learning: a building block.

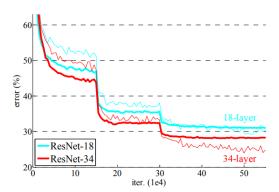

■ Why ResNet can avoid vanishing gradient problem??

$$\mathbf{x}_{L} = \mathbf{x}_{l} + \sum_{i=l}^{L-1} \mathcal{F}(\mathbf{x}_{i}, \mathcal{W}_{i}),$$

$$\frac{\partial \mathcal{E}}{\partial \mathbf{x}_{l}} = \frac{\partial \mathcal{E}}{\partial \mathbf{x}_{L}} \frac{\partial \mathbf{x}_{L}}{\partial \mathbf{x}_{l}} = \frac{\partial \mathcal{E}}{\partial \mathbf{x}_{L}} \left(1 + \frac{\partial}{\partial \mathbf{x}_{l}} \sum_{i=l}^{L-1} \mathcal{F}(\mathbf{x}_{i}, \mathcal{W}_{i}) \right).$$

Learning better networks as easy as stacking more layer

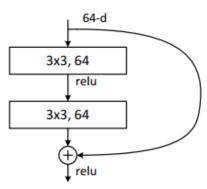

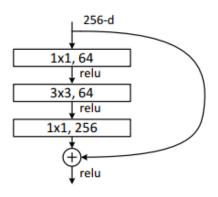

Build Residual Block

Example: a residual block with 64 feature maps

Basic block

Network Architecture for Cifar-10

For Basic block

output map size	32×32	16×16	8×8
# layers	1+2 <i>n</i>	2n	2n
# filters	16	32	64

Total Depth = 1 (conv) + 6n + 1 (linear layer)

For example, to build ResNet-110, we need n = 18 ((110-2)/6).

Note that there is global average pooling before linear layer.

• Data preprocessing:

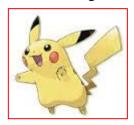

Color normalization

Normalize each color channel (compute from entire CIFAR10 training set)

Mean
$$\begin{bmatrix} R \\ G \\ B \end{bmatrix} = \begin{pmatrix} 125.3 \\ 123.0 \\ 113.9 \end{pmatrix}$$

Standard deviation
$$\begin{bmatrix} R \\ G \\ B \end{bmatrix} = \begin{pmatrix} 63.0 \\ 62.1 \\ 66.7 \end{pmatrix}$$

• Data augmentation: Translation and Horizontal flipping:

Original

Translation

Horizontal flipping

Implementation Details:

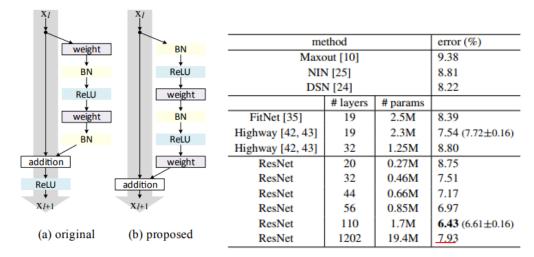

- Training Hyperparameters:
 - Method: SGD with momentum
 - Mini-batch size: 128 (391 iterations for each epoch)
 - Total epochs: 164, momentum 0.9
 - Initial learning rate: 0.1, divide by 10 at 81, 122 epoch
 - Weight decay = 0.0001
 - Weight initialization: torch.nn.init.kaiming_normal
 - Loss function: cross-entropy
- Data augmentation parameters:
 - Translation: Pad 4 zeros in each side and random cropping back to 32x32 size
 - Horizontal flipping: With probability **0.5**

Methodology:

- ResNet-20 got 92.37% accuracy, Time: 0.58 hr
- ResNet-56 got 93.53% accuracy, Time: 1.48 hr
- ResNet-110 got 93.95% accuracy, Time: 2.87 hr
- ✓ On single Titan X (Maxwell)

Extra Bonus:

- Identity Mapping in deep residual networks [2].
 - Pre-activation Residual Network (pre-act ResNet)

■ Try pre-act ResNet-20/56/110

Report Spec: [black: Demo, Gray: No Demo]

- 1. Introduction (15%)
- 2. Experiment setup (15%)
 - The detail of your model
 - Report all your training hyper-parameters
- 3. Result
 - The comparison between ResNet and vanilla CNNs
 - Final Test error (10%, 15%)
 - Training loss curve (you need to record training loss every epoch) (10%, 15%)
 - Test error curve (you need to record test error every epoch) (10%, 15%)
- 4. Discussion (20%, 25%)

Demo (20%) [抽人 DEMO]

----- Criterion of result (ResNet-110)----

Accuracy > 93% = 100%

Accuracy: (93.0~90.0)% = 90% Accuracy: (90.0~87.0)% = 80% Accuracy < 87.0% = 70% Accuracy: 10% = 0%

評分標準: 40%*實驗結果 + 60%*(報告+DEMO)
